CAREER OBJECTIVE

Undergraduate Computer Science and Engineering student with a strong foundation in AI, Machine Learning, Data Science and Python programming. Skilled in Data Structures and Algorithms, Database Management Systems, Operating Systems, Computer Networks and modern web technologies. Passionate about building intelligent applications, developing scalable solutions, and leveraging AI to solve real-world problems.

EDUCATION

Vignan's Institute of Information Technology (VIIT) Bachelor of Technology in Computer Science and Engineering	2023–2027 CGPA: 9.24
--	-------------------------

EXPERIENCE

AI–Machine Learning Intern — Council for Skills and Competencies (CSC India) May 2026 – Jun 2026

- Completed an AI–Machine Learning internship to gain practical knowledge in machine learning concepts and data-driven problem solving.
- Applied Python, data preprocessing, exploratory data analysis, and supervised learning techniques to develop and evaluate machine learning models.
- Enhanced practical AI/ML skills by building predictive models and understanding the end-to-end machine learning workflow.

PROJECTS

AI-Powered Stock Market Intelligence & Quantitative Research Terminal GitHub

- Developed an end-to-end stock market prediction system using Machine Learning (Random Forest, XGBoost) and Deep Learning (LSTM, GRU, Transformer) models to forecast 5-day stock price direction.
- Built a FastAPI-based backend with automated market data ingestion, 30+ technical indicators, SHAP explainability, portfolio optimization, and financial news sentiment analysis.
- Technologies: Python, FastAPI, Pandas, NumPy, Scikit-learn, PyTorch, XGBoost, SHAP, Chart.js, HTML, CSS, JavaScript, Docker.

Credit Card Churn Prediction — Customer Retention System GitHub

- Developed a machine learning model to predict customer churn using customer demographic and banking behavior data.
- Performed data preprocessing, feature engineering, model training, and model evaluation to improve prediction accuracy.
- Technologies: Python, Pandas, NumPy, Scikit-learn, TensorFlow/Keras, Flask.

Fake News Detection — Machine Learning Classification System GitHub

- Developed a machine learning model to classify news articles as real or fake using natural language processing techniques.
- Performed text preprocessing, TF-IDF vectorization, and trained a Logistic Regression model for accurate news classification.
- Technologies: Python, Pandas, NumPy, Scikit-learn, TF-IDF Vectorizer, Logistic Regression.

Technical Skills

Programming Languages: Python, Java, C

AI & Machine Learning: Machine Learning, Deep Learning, Natural Language Processing (NLP), Scikit-learn, TensorFlow/Keras, Model Training, Model Evaluation, LLM, RAG

Data Science: Pandas, NumPy, Data Preprocessing, Exploratory Data Analysis (EDA), Feature Engineering, Data Visualization

Core CS Fundamentals: Data Structures and Algorithms (DSA), Database Management Systems (DBMS), Operating Systems (OS), Computer Networks (CN)

Tools: Git, GitHub, VS Code, Jupyter Notebook, Google Colab

CERTIFICATIONS

- IBM SkillsBuild – Team Essentials for Designing AI Solutions.
- EY and Microsoft – AI Skills Passport.
- Coursera – Artificial Intelligence Essentials V2.
- SoloLearn — Python Fundamentals
- ApexPlanet Pvt. Ltd. — 45 Days Internship Certificate
- Vault of Codes — Web Developer Internship
- Council for Skills and Competencies (CSC India) — AI & Machine Learning Internship (APSCHE)

ACHIEVEMENTS

- Solved 286 coding problems on LeetCode.
- School-level achievements in Drawing.
